DISASTER RECOVERY

The ability to seamlessly fail over to backup infrastructure is a critical part of a holistic IT infrastructure strategy. We can assist in meeting that need.

RESILIENCE

We provide a resilient platform to support your business continuity plan. Businesses demand uptime and availability for the solutions they deploy and use. Any disruptions, whether they are planned maintenance or unforeseen outages, can seriously affect the bottom line. We offer solutions that help you to mitigate risk from downtime and protect against critical data loss.

SIMPLICITY

Our business continuity solution allows for continuous replication to maintain data integrity as well as backups for long-term retention. Our network resources allow us to quickly and easily restore your site in the event of an outage. The combination of the two makes it easy to "Land and Expand," providing workload mobility and ease of movement between in-house and managed infrastructures. We enable customers to truly harness the abilities of multi-cloud and hybrid could environments.

VALUE

We provide a comprehensive set of tools and service offerings:

1 The Solutions Engineering team that **partners** with you to create and maintain a solution that meets your needs.

2 The **internal analytics platform** provides our teams the ability to predict the changes in your disaster recovery requirements and make sure you stay ahead of your future resource requirements.

3 A **highly flexible platform** that can work with nearly every major public cloud, private cloud, and bare metal computing platform, enabling you to have a one-stop shop for your disaster recovery planning.
